

Europa: Water, Water, Everywhere?

T. V. Johnson, Jet Propulsion Laboratory, Caltech

Jupiter's moon, Europa, may have a subsurface, global ocean. Dr. Johnson, the Galileo Project Scientist, will review the data and arguments concerning Europa's icy crust and possible ocean environment. He will also discuss plans for the Europa Orbiter mission and future missions to land on Europa's surface and possibly probe beneath the ice into the water layer.

This work was done under a contract from NASA.
